

SOBERANES FIRE

CA-BEU-003422

OPERATIONAL PERIOD

FRIDAY JULY 29TH 0700 to SATURDAY JULY 30TH 0700

INCIDENT OBJECTIVES (ICS 202)

1. Incident Name: Soberanes	2. Operational Period: Date From: 7/29/16								
3. Objective(s): Management Objectives									
 Provide for and maintain public and first responder safety by utilizing the incident safety analysis process. Protect all critical assets at risk to include the redwoods, historical assets within the affected area, infrastructure and improvements, watershed, and transmission lines. Utilize tactics that promote protection of sensitive natural and cultural resources in the Ventana Wilderness. It is the Unified Incident Commander's Leader's Intent to ensure collaboration at all levels of the incident. Be financially responsible for all management and fire suppression tactics. Foster and enhance community and political relationships. All management actions and efforts will be focused on serving, safeguarding and protecting the citizens and natural resources of Monterey County. Control Objectives Keep the fire North of the Nacimiento-Fergusson Rd Keep the fire South of Huckleberry Hill Keep the fire East of Hwy 1 in the North and the Coast Ridge in the South 									
4. Operational Period Command Emphasi Perimeter Control, Structure Defense, Impro	s: ove Contingency Lines, Hold and Improve Existing Control Lines

Soberanes Fire Weather Forecast

FORECAST NO: 6 NAME OF FIRE: Soberanes

PREDICTION FOR: 0700 Fri-0700 Sat UNIT: CA-BEU/LPF

SHIFT DATE: 7/29-7/30 SIGNED:

TIME AND DATE Incident Meteorologist- Ryan Walbrun FORECAST ISSUED: 1900 7/28/16 Incident Meteorologist- Ryan Walbrun NWS-Bay Area

WEATHER DISCUSSION: The marine layer will remain around 1000 feet and only impact the Branch IV divisions. Otherwise the overall changes in the weather will be minor today across the fire even though high pressure aloft is slowly weakening. Smoke will continue to be the biggest driver of local effects with heavy smoke shading keeping temperatures locally cooler with some higher humidity where heavy smoke lingers. The winds aloft will become a little more southerly so Div P/M/K may clear out earlier than previous days. Be

smoke shading keeping temperatures locally cooler with some higher humidity where heavy smoke lingers. The winds aloft will become a little more southerly so Div P/M/K may clear out earlier than previous days. Be aware of breaking inversion as a Watch Out Situation. Local southwest winds may be adverse to the containment lines in Branch I and II but wind speeds are expected to be light. Given this wind forecast it's expected that the Carmel Valley helibase will see smoke with poor visibility today. The forecast for tonight will be similar to the past few evenings. Humidity values may recovery slightly better but still be very poor with mild overnight lows. Some deepening of the marine layer and associated cooling is possible over the weekend but no significant weather changes forecast at this time.

WEATHER FORECAST FOR Friday:

WEATHER: Areas of smoke...otherwise sunny, hot and dry. Except some morning fog along Hwy 1.

TEMPERATURES: Little change. 84 smoky areas to 94 full sunshine. 69-78 along Hwy 1 in Div X/Z.

HUMIDITY: Afternoon minimums 14-24% above 1000 feet inland Divisions. 35-50% Div T/X/Z.

20 FT WINDS:

RIDGETOP - Southerly 4-8 mph afternoon gusts 10-12 mph.

SLOPE/VALLEY - Becoming upcanyon 2-5 mph afternoon gusts 8-10 mph.

Marine Layer: Around 1000 feet and only impacts along Hwy 1 in Div T/X/Z.

WEATHER FORECAST FOR Friday Night:

WEATHER: Areas of smoke otherwise mostly clear. Mild and dry with low humidity except fog on the coast.

TEMPERATURES: 67-77 above 1500 feet. 52-59 along Hwy 1 in Div T/X/Z.

HUMIDITY: Poor recovery 15-25% above 1500 feet except locally 9-15% after midnight

above 1500 feet. Good recovery 60-80% lower slopes Div T/X/Z along the coast.

20 FT WINDS:

RIDGETOP - Southerly 3-6 mph.

SLOPE/VALLEY – Evening upcanyons 2-5 mph...becoming light overnight.

Marine Layer: Around 1000 feet...may deepen to 1500 feet by Saturday morning.

SAFETY INFORMATION: Watch for breaking inversions. Heat related issues are still likely. Stay hydrated!

WEATHER SUMMARY. HOT and DRY WEATHER WILL CONTINUE!!! PLEASE REVIEW INCIDENT METEOROLOGIST FORECAST

OUTPUTS

FIRE BEHAVIOR

GENERAL

Fire activity increased yesterday earlier than previous days around 1300 under clearer skies and continued through out the night until 0500. **ERC will be at historic highs for this operational period**. Indirect line construction or smokey conditions may make it difficult to see the main fire and **reaction time to escape routes** must be planned accordingly. The fire is burning in a mix of brush, grass and timber understory; fuels will vary by slope and aspect. The southeast side of the incident has moved into the Basin burn scar and has had little effect on fire spread. The Central Coast was affected more than most areas by drought over the last 6 years resulting in large amounts of dead, dying and diseased fuels. The fire is primarily fuel and topography driven, but areas where the marine layer is mixing expect shifting erratic winds. Steep canyons with backing fire will have the potential for rollout and slope reversal resulting in dangerous rates of spread upslope. RH will drop after midnight and activity will increase.

Probability of Ignition = 85%. Spotting Distance= 1/4 mile

Fine Dead Fuel Moisture = 3-5% Energy Release Component in the fire area are above the 97th

SPECIFIC

BRANCH I

Divisions A, B, C, F

The RAWS in Division A will continue to show extremely low RH and moderate fire active should be expected. Rollout and slope reversal will continue to challenge direct fire control efforts. Look for shifting winds as the marine layer moves up and down the drainages near the coast. Sustained hot and dry weather over the last few days and more solar radiation may increase fire behavior in previously quiet divisions. Watch out working on indirect line in receptive fuel beds where spot fires can be established.

BRANCH II

Divisions G, H, I, J

Sustained hot and dry weather over the last few days and more solar radiation will increase fire behavior and lookouts must be used in all situations. The fire should have moderate to dangerous rates of spread where slope and drought stressed fuels align. Some sustained crown runs have been observed and but mostly rollout and slope reversal runs have challenged control efforts. Fire activity will increase around 1300 and again after midnight. Watch out working on indirect line in receptive fuel beds where spot fires can be established.

BRANCH III

Divisions K, L, N, O, M, P

Indirect line construction must use lookout to know what the fire is doing at all times. Hotter and dryer conditions will increase activity throughout the branch. Heavy fire active has been observed in this branch will some sustained crown runs. Spotting across drainages and canyons may cut off escape routes. The fire should be active all day and all night under low RH. Any firing operations must use situational awareness and not rely on aircraft for firing plan. Monitor RH for all firing operations.

BRANCH IV

Divisions S, T, X, Z

Fire activity should be light in Divisions T, X and Z but a shallower marine layer may expose fire line that could be come active under hotter and dryer conditions. Division S has been active under clearer skies and lower RH. Look for rollout into areas of heavy fuel and up slope runs.

AIR OPERATIONS:

- Smoke or fog could make visibility difficult through out the incident
- Fire Behavior can change rapidly don't rely on air craft for your plan

SAFETY

- · Indirect line must have lookouts that can see the main fire
- Expect fire activity after midnight due to a drop in RH, monitor weather every hour
- · Dead trees could fall and cut off escape routes

SAFETY MESSAGE SOBERANES

16-CA-BEU-003422 - July 29, 2016 - 0700 TO 0700

FATIGUE

CREWS ON THE ROAD and FIRELINE

Watch	Out
AAarcii	Out

- Impacts situational awareness when working in steep difficult terrain
- Impacts personal safety, efficiency and performance
- Impacts everyone's safety while navigating in this steep, loose terrain

Mitigation

- Brief crews specific to the special instructions in 204 to divisional assignment
- Implement the buddy system for monitoring well being
- Schedule work/rest cycle based on workload and weather, intake Water and Food

HAZARD TREES

DROUGHT STRESSED TREES IN and AROUND the FIRE AREA

Watch Out

- · Working in and around redwood, conifer and oak trees
- Be aware of dead standing trees and snags
- · Fire weakened and drought stressed trees

Mitigation

- Be vigilant and alert, "Look-Up" when working around any trees
- Post lookouts to oversee tactical operations
- Identify and Isolate HAZARD trees with red and white, "THREE STRIPES you're out" flagging

FIRE BEHAVIOR / WEATHER

HISTORY OF INCREASED NIGHT ACTIVITY and WIND SHIFTS IN FIRE AREA

Watch Out

- Low humilities in this region increases the NIGHT TIME Fire Behavior
- Wind changes throughout the burn period
- Weather becoming hotter and drier

Mitigation

- Keep informed on predicted fire weather conditions and forecasts
- Base all actions on current and expected fire behavior
- Take spot weather forecasts often and observe changes in your area

JACK PICCININI TEAM-SAFETY OFFICER

	-								

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.

Air Guard must be in the last channel of every plan (168.6250, PL 110.9 on TX only) Once 205 is complete, email it to com205@fire.ca.gov or fax to the local ECC and ask them to email it for you.

STATIUS	
Incident Start Date: 07/22/2016	Incident Start Time: 8:48 am
Incident Type: Wildland	Cause:
Incident Location: Soberanes Creek, Garrapata State Park, Palo Colorado, north of Big Sur	Total Personnel:
Acreage:	Containment:

MEDIA – The California State Penal Code Section 409.5(d) allows the news media to enter scenes of disaster, riot or civil disturbance. Properly identified members of the news media should not be restricted from entering locations specified within the code. However, this does not include crime scenes, private property and does not imply that the news media may interfere with incident operations while they are in the areas of concern. You can get further information about Penal Code Section 409.5(d) at http://www.lecinfo.ca.gov/cgi-bin/displaycode?section=pen&group=00001-01000&file=403-420.1

CAL FIRE SOCIAL MEDIA POLICY – When on a CAL FIRE incident you will adhere to the CAL FIRE Social Media Policy, Section 0691. You can get further information about the CAL FIRE Social Media Policy at http://calfireweb.fire.ca.gov/library/handbooks/0600/0691.pdf

PHOTOGRAPHS AND VIDEOS OF INCIDENT – We are in a new era of media. Media no longer means news/broadcast industry, but now refers to anyone that has the capability to shoot video, photographs and post them onto social media sites in a matter of minutes. Unfortunately, we have seen some instances of photographs or videos that have depicted unsafe, unprofessional or embarrassing circumstances which are a serious breach of ethics. When this happens, it reflects poorly on all that are attached to this incident. Posting an inappropriate video, photo or blog comment could expose oneself to unwanted ramifications. It may be unsafe to shoot photos or video and a firefighter who is concentrating on a camera loses their situational awareness.

The Public Information Office would like copies of the video and pictures that you safely took while not in an emergency situation, fire suppression activity or in an overhead assignment. Bring your video and pictures to the Public Information trailer; they will be reviewed and possibly uploaded to our many CAL FIRE social media sites. Remember, we don't want photographs or videos that depict unsafe, unprofessional or embarrassing circumstances, which are a serious breach of ethics. You can also send your photographs and videos to the following email Soberanesfire2016@gmail.com

LOST AND FOUND – The Information Section will manage lost and found items for the incident. If you have lost an item please leave your contact information and what you have lost at the Information Section. If you have found an item on the incident, bring the item to the Information Section with your contact information as well.

MAIL SERVICE - The Information Section will assist you in getting items mailed from the incident as well as receiving items whether it is letters or packages.

CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE PLAN

California Drought Emergency

The following shall be considered and implemented by all fire resources as a means to provide maximum efficiencies when utilizing water resources, while minimizing the impacts to private and public water supplies. Accountability shall be maintained for all water supplies that are utilized and care should be applied to ensure proper replacement and/or reimbursement to the supplier/ owner.

Fireline personnel- (During mop up operations)

- Use of Pencil Hose and Garden Nozzles with Shut-Offs.
- Use of Back pumps.
- Dry Mop-up and consolidation of heavy fuels to areas where they can burn out safely
- Locate/ Relocate Firelines to lighter fuels or natural barriers when safe.
- Set up and use portable tanks in anticipation of longer transport times for Water Tenders.
- · Use of foams, gels and other water enhancers.
- Evaluate need to mop up in excess of 200 feet from fireline

Road Maintenance and Repair-

- · Monitor and water roads only when and where needed.
- Water when most effective (evening and nights).
- Use chemical treatments when available (Magchloride, Omni bind etc).
- Consider use of tertiary or treated water (sp)

Aviation Operations-

- Use of Gels, Foams and Retardants. Set up portable plants.
- Consider Blivits and Pencil hose for interior mop up operations as opposed to numerous bucket drops.
- Establish and use pre-use agreements for existing and known water sources.
- Use large watershed dip sites when able. Minimize use of small, static ponds and lakes.
- Maintain accountability of water used and locations of dip sites.
- · Evaluate need for interior bucket drops

Private Water Supplies-

- Notify property owner as early as possible.
- Minimize usage and develop alternative water supplies when and where appropriate.
- Track usage (meter, 214 form) and develop a plan to replace water.
- Make arrangements for reimbursement and damage claims if needed.

Public/ Municipal Water Supplies-

- Notify Agency as soon as possible and request a representative to the incident.
- · Identify fill areas and request metering devices. Place on incident map.
- Use alternative or reclaimed water sources when available. Place on incident map.
- Make arrangements for reimbursement and damage claims if needed.

Management and Supervision-

- Use leaders intent and consider establishing Water Conservation as a Management Objective.
- Consider complexity of water use on incidents. Consider establishing a Water Supply Group Supervisor to coordinate additional resources to support the incident needs.
- Complete the Water Usage Report daily and turn in to Finance
- · Review this check list and brief daily.

TRAINING SPECIALIST MESSAGE

A Training Specialist is available for trainees on the incident.

All federal, state and local government agency trainees working on position task books will need to register with the Incident Training Specialist in order to receive proper credit for your assignment. We are located next to Check-In.

Bring your task book with you.

Training Specialist

Dennis Martin 707-479-8421 Jonathan White 562-324-1811

CAL FIRE INCIDENT MANAGEMENT TEAM WATER USAGE LOG

lease note if you made contac					

The intent of this document is intended to track, record and validated the amount of water used on a incident. It's not intended to review the performance of equipment using the water on an incident.

Archaeological and Historical Sites Fireline Guidance for the Soberanes Incident Do not compromise safety for the protection and preservation of archaeological and historical sites. When feasible and prudent:

- 1. Be on the lookout for prehistoric and historic sites. Prehistoric archaeological sites include temporary camps containing scatters of obsidian and/or chert flakes that often look like broken glass. More permanent village sites containing circular depressions (house pits), artifact scatters, and dark brownblack soils (midden). These typically occur on flats near sources of water, along ridgetops and saddles, and other such places suitable for camping. Historic sites include old wooden buildings, structures and corrals, rock foundations, wells, and debris scatters. These kinds of resources can be found in the same kinds of environmental settings as prehistoric camp sites.
- 2. No archaeological or historical sites have yet been flagged. If you observe artifacts, features, or sites, attempt to avoid dozing or driving through and/or parking on these sites, if feasible, especially with heavy equipment.
- 3. If you can't avoid sites, minimize disturbance as much as feasible, only clearing the surface to as minimal a depth and width as necessary.
- 4. Leave all artifacts in place. Some artifacts may have been intentionally placed for religious or ceremonial reasons.
- 5. When a site is discovered, flag it for visibility and report its location to the Division Supervisor. If feasible, note locations of discovered resources on a map. Better yet, take a GPS reading. Leave information with the Plans Section so that the sites can be relocated and protected during both the suppression and fire suppression repair phases of the Incident.
- 6. If you encounter a burial or other human remains, cease work in that area immediately and contact the CAL FIRE Archaeologist. State law requires that CAL FIRE then contact the County Coroner, who will then determine if the remains are part of a crime scene. If the Coroner determines that the remains are Native American, State law requires the Coroner to contact the Native American Heritage Commission in Sacramento.

Wilderness Special Instructions – Resource Advisor

DOZER LINES - DIVISIONS K, M, & P

- Dozer lines will <u>not exceed 50 feet in width</u> except for safety reasons.
- Dozer lines in Wilderness will be repaired later; construct line to minimize impact.
- Do not push brush off steep hillsides it will be spread over the line during repair.
- Minimize removal of top soil it will be spread back over the line during repair.
- Avoid riparian areas, seeps and springs.

Wilderness Minimum Impact Suppression Tactics (MIST)

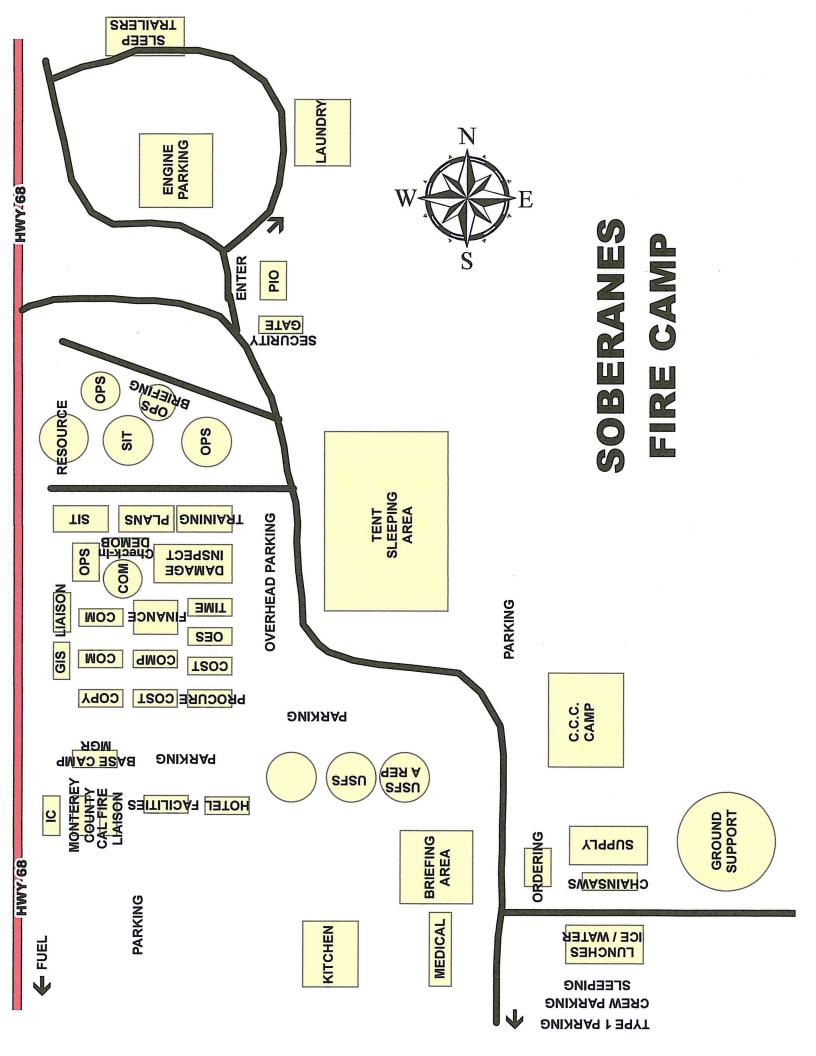

The intent of Minimum Impact Suppression Tactics is to suppress a wild fire with the least impact to the land. Fire conditions and good judgment dictate the actions taken. Consider what is minimally necessary to halt fire spread and contain it within the fireline.

FIRELINE CONSTRUCTION PHASE:

- Use cold-trail, wet line or combination when appropriate.
- Allow fire to burn to natural barriers.
- If constructed fireline is necessary, use minimum width and depth to check fire spread.
- Remove or limb only those fuels that if ignited would have potential to spread fire outside the fireline.
- Minimize cutting of trees, burned trees, and snags unless determined they will cause fire spread across the fireline or endanger workers.
- Cut brush or small trees flush to the ground; camouflage the cut surface with soil or brush.

HELISPOT CONSTRUCTION:

- Consider using a long line remote hook in lieu of constructing a helispot.
- If construction is necessary, consider natural openings, or previously used areas. Cut only what is necessary to achieve safe operating space.
